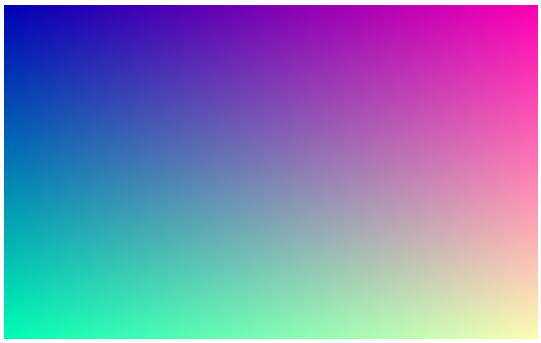
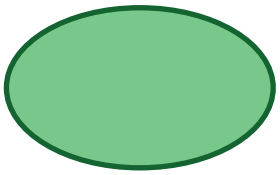
Demo document

RustPDF is a PDF document editor written in Rust. It lets you edit the text, replace images, add annotations, fill in forms and reorder the pages without leaving the application. This paragraph is made of several separate lines in the file: the editor groups them into a single text block that can be edited in one go, then automatically rewraps the lines to fit the width of the column, as in a word processor.

A second text in Times font, smaller.





Search for the word "paragraph" with Ctrl+F, or double-click here to edit.
